

Bird stop is a stainless steel plate you can use to close the aperture to keep out birds, squirrels etc from the bin contents. When you push lightly the plate it opens inwards on it's upper hinges and you can drop litter into the bin. Product code for 60 and 100-liter CT-bins is CT-B60RST and for 30-liter bin CT-B30RST. You can insert the Bird stop plate also afterwards to a CT-bin, the fixing is simply two bolts in the upper corners.
